

A Modules that separate younger from older

Mean Pre/Post ME | $q < .05$ solid, $p < .05$ dashed

B Modules that separate pre from post training

No older module reaches $p < .05$ | rest in S7 Figure

C Module-Phenotype Coupling (Age-Dependent)

Pre or Δ Pre-Post ME vs Δ phenotype | r by stratum | BH over 180 tests: 2 raw, 0 q | labels: enrichment then hub
